Value!**

C-1000

Public Building Wheelchair Elevator

System Overview

The Access 2000 C-1000 Public Building Wheelchair Elevator is a fully enclosed vertical elevator. The design stems from our vision of a reliable, safe, easy to use, and above all high quality means of access in any multi-level public building.

The C-1000 will accommodate from 2 to 5 stops. A variety of standard platform configurations, as well as our capabilities as a custom manufacturer allow us to find a solution to most situations. The shaft may be wood or masonry construction and requires a shallow pit (8" to 12") for the platform to level into the bottom landing.

Control System

The C-1000 obtains it's comfortable, reliable and user friendly operation from the distinctive design of our control system. Driven by an industry leading 2 speed, weight compensating hydraulic pump unit, the C-1000 gives you a smooth and pleasurable ride regardless of load. The C-1000 is packed with essential safety features such as auto-transfer emergency power and manual lowering/lifting on the pump unit. And our accurate leveling system ensures that the user always has a smooth transition to and from the elevator car.

Car Enclosure

The enclosure of the C-1000 is constructed using top quality TFM panels that are mounted into an extruded aluminum framework (powder coat finishes optional). Our standard non-slip flooring applied onto the structural steel/plywood base provides a durable and functional finish to the platform (flooring options are available). The "sunshine ceiling" is constructed of white acrylic panels with two 4 foot flourescent fixtures above to provide even and adequate lighting (also functions as emergency lighting).

SUSPENDED "SUNSHINE CEILING"
("SOLID CEILING" WITH POT LIGHTS - OPTIONAL)

FLOURESCENT LIGHTING FIXTURE (2)
AUTOMATIC ON/OFF CONTROL
AUTOMATIC EMERGENCY LIGHTING

ELECTRONIC SAFETY SCREEN
PLACED AT EACH CAB OPENING

Standard Features

The standard features for the C-1000 are listed below. We also realize that no two situations are exactly the same. That is why we offer the most flexible design and installation options in the industry. If our standard features fail to meet the needs of your project, please contact your local Access 2000 representative to discuss options that will turn the C-1000 into an integral part of your building.

- 1000 lb (454 Kg) capacity
- In-car emergency lowering
- Manual emergency lowering
- Manual emergency lifting
- Auto-transfer battery back-up power
- Auto on/off fluorescent cab lighting
- Stainless steel/solid oak handrail
- Stainless steel car/call stations
- Seamless non-slip flooring
- Aluminum cab framework
- 3/4" TFM wall panels
- Suspended "sunshine" ceiling
- GAL type-N interlocks
- 1.5 hour fire rated landing entrances
- 8 lb elevator guide rails
- Programable logic controller
- Industry leading leveling system
- Single phase 3.5 hp submersed motor/pump
- True two speed weight compensating "whisper quiet" oil hydraulic drive

Common Options

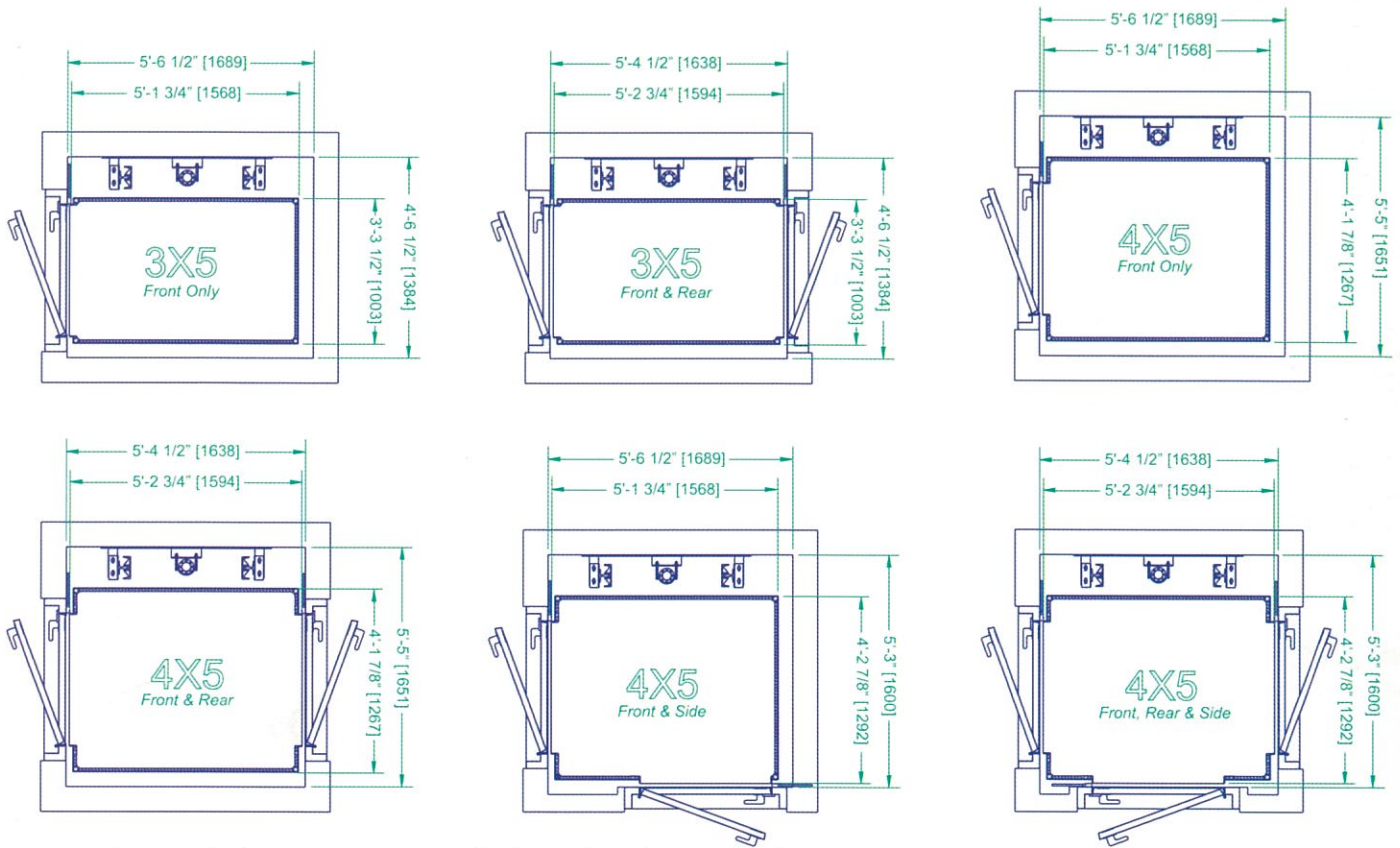

- Custom platform sizing
- Custom cab interior
- Custom flooring
- Telephone cabinet
- Power door operators
- Electronic safety screen
- Brass fixtures

Codes

Our products meet or exceed both US and Canadian codes such as ANSI and CSA. However, since local codes may vary from one location to another, it is always important to consult with your local representative before specifying any lift.

Public Building Wheelchair Elevator

Typical Platform Configurations

Due to our continuous product improvement program, specifications in this brochure may be subject to change without notice.

Typical design layouts shown above. Contact a representative for the full range of our standard and custom size platform designs, including the 3'x7' coffin platform, our 3 1/2'x5' platform and the compact 3'x4' platform. All layouts are designed to suit wood or masonry construction.

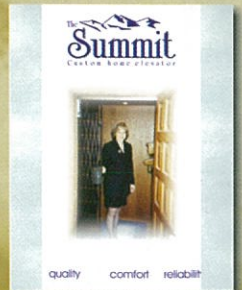

Architects and Designers
